POST-INDUSTRIAL/PURE EPDM RUBBER

FAQs:

One question we're asked all the time: What's the best specification criteria for choosing my floor?

Here's the answer in a nutshell:

COLOR:

The color of your flooring should fit with the overall design concept, but it should also suit your specific application. For example, light colors like white don't work well in heavy traffic areas.

TEXTURE:

Choose the proper emboss for your floor, based on both aesthetics and application. A deep/highly embossed flooring tends to show less dirt. Whereas, a glossy floor with no emboss shows everything. Our Ground Control products have three different embosses, so be sure to select a product with the best emboss for your project.

CHARACTER OF FILM:

This is where style really comes into play. Choose the flooring pattern to meet your space's unique design. For example, consider the wood species used, how much grain shows and how that will play in your overall design.

MAINTENANCE:

Be sure to select a flooring that's in keeping with the maintenance program specific to your location, traffic, space, and finishes

Color & Quality:

Ground Control Surfaces Rhythms is manufactured using the highest quality pure virgin and recycled rubber material available. Combined, these products create an indoor environment that is quiet to the core, while offering the performance of a true resilient floor using sustainable materials.

This product is provided in a 4mm overall thickness to enhance its acoustic properties and to add to the overall durability of the floor.

Please check with your Ground Control Surfaces sales representative to discuss options and details.
