novo[®] WALL

wallcovering | window film | digital

COMPANY PROFILE

DeNovo Wall is the interior designers' choice for a rich and varied selection of the latest in commercial wallcoverings. We showcase contract wallcovering solutions that reflect current design trends in the interior design and architectural market. These leading-edge designs feature a wide array of colors, patterns and textures that provide limitless creative possibilities for any application.

From corporate to hospitality; healthcare to government; retail to residential, the DeNovo Wall collection of wallcoverings offers a wealth of inspired design options. Combining a contemporary palette with a stunning spectrum of neutrals and colors, extraordinary finishes and evocative patterns, DeNovo Wall commercial wallcoverings can help you express your vision and meet any design challenge.

WHY CHOOSE VINYL WALLCOVERING?

Cost Effective

- Longer Life Cycle than Paint, averaging 10-15 years.
- Little to no maintenance compared to painting every few years.
- Durable, protects the wall from average wear and tear.

Non-Toxic

- Featuring Low VOC, Indoor Air Quality requirements for green building.
- Topcoats featuring antimicrobial technology.

Sustainable

- Tested and used for decades.
- More durable and have longer life cycle than most other wall finishes.

Durable, Cleanable
& Long-Lasting

Order your FREE samples today!

Spartina™

52" / Type II FBV Mylar® / 20 oz.
This pattern is constructed with Mylar and has special installations instructions. please visit denovowall.com for more information prior to installation.

Low VOC
01350 compliant

Weight:
20 oz./lin. yard (619 G/PLM)
13.3 oz./sq. yard (451 G/PSM)

Backing: Osnaburg
Repeat: Horizontal 52" x Vertical 18"

All patterns are stocked in 30 linear yard bolts and must be ordered in 15 yard increments.

Fire Hazard Classification Results:
Tested in accordance with
ASTM E-84 Tunnel Test
Class "A" Fire Rated

Flame Spread 20
Smoke Development 60

Meets Type II CCC-W-408A through
D & W-101 requirements for
Washability, Scrubbability,
Abrasion Resistance and Stain
5-year warranty

Past, Present & Future of Healthcare Design

Throughout history, our healing environments have ranged from our home, to the church, and then developed to what we now identify as hospitals. At a time when home care was the norm, most hospitals were charities, providing free or low-cost care to the sick and poor.

In the first decades of the 20th century, hospitals became locations of collaborative, specialized medicine that served all classes of patients. Designed for physicians and the increasingly complicated medicine they practiced, facilities ranged from smaller, medically specialized institutions to gargantuan teaching hospitals and medical centers. Modern medicine requires modern facilities.

During the 18th century, hospitals were not just places of healing, but institutions of disease prevention. Gathering sick individuals in a common space clearly came with risks. Indeed, infections proliferated in large wards and became known as 'hospital diseases'. As a result, not everyone actively sought hospital care, and staff frequently shifted their attention from healing patients to curing their buildings.

Today's healthcare design follows the same principles as medicine itself: extensive research, science driven decisions and constant reassessment. The inclusion of environmental factors that contribute positively to healing in preference to any other design element represents the precursor to "evidence based design," a research field that specifically looks at the role of the hospital building related to human health, healing, and comfort.

Pavilion-ward designs were popularized worldwide by Florence Nightingale- known as the lady with the lamp in 19th Century. These hospital buildings included hygienic materials and details, large open wards and support spaces. Nightingale recognized that cleanliness within the hospital ward correlated to patient survival and healing. In the decades that followed, hospital design began gradually shifting away from wards to single bedrooms to reduce the spread of disease.

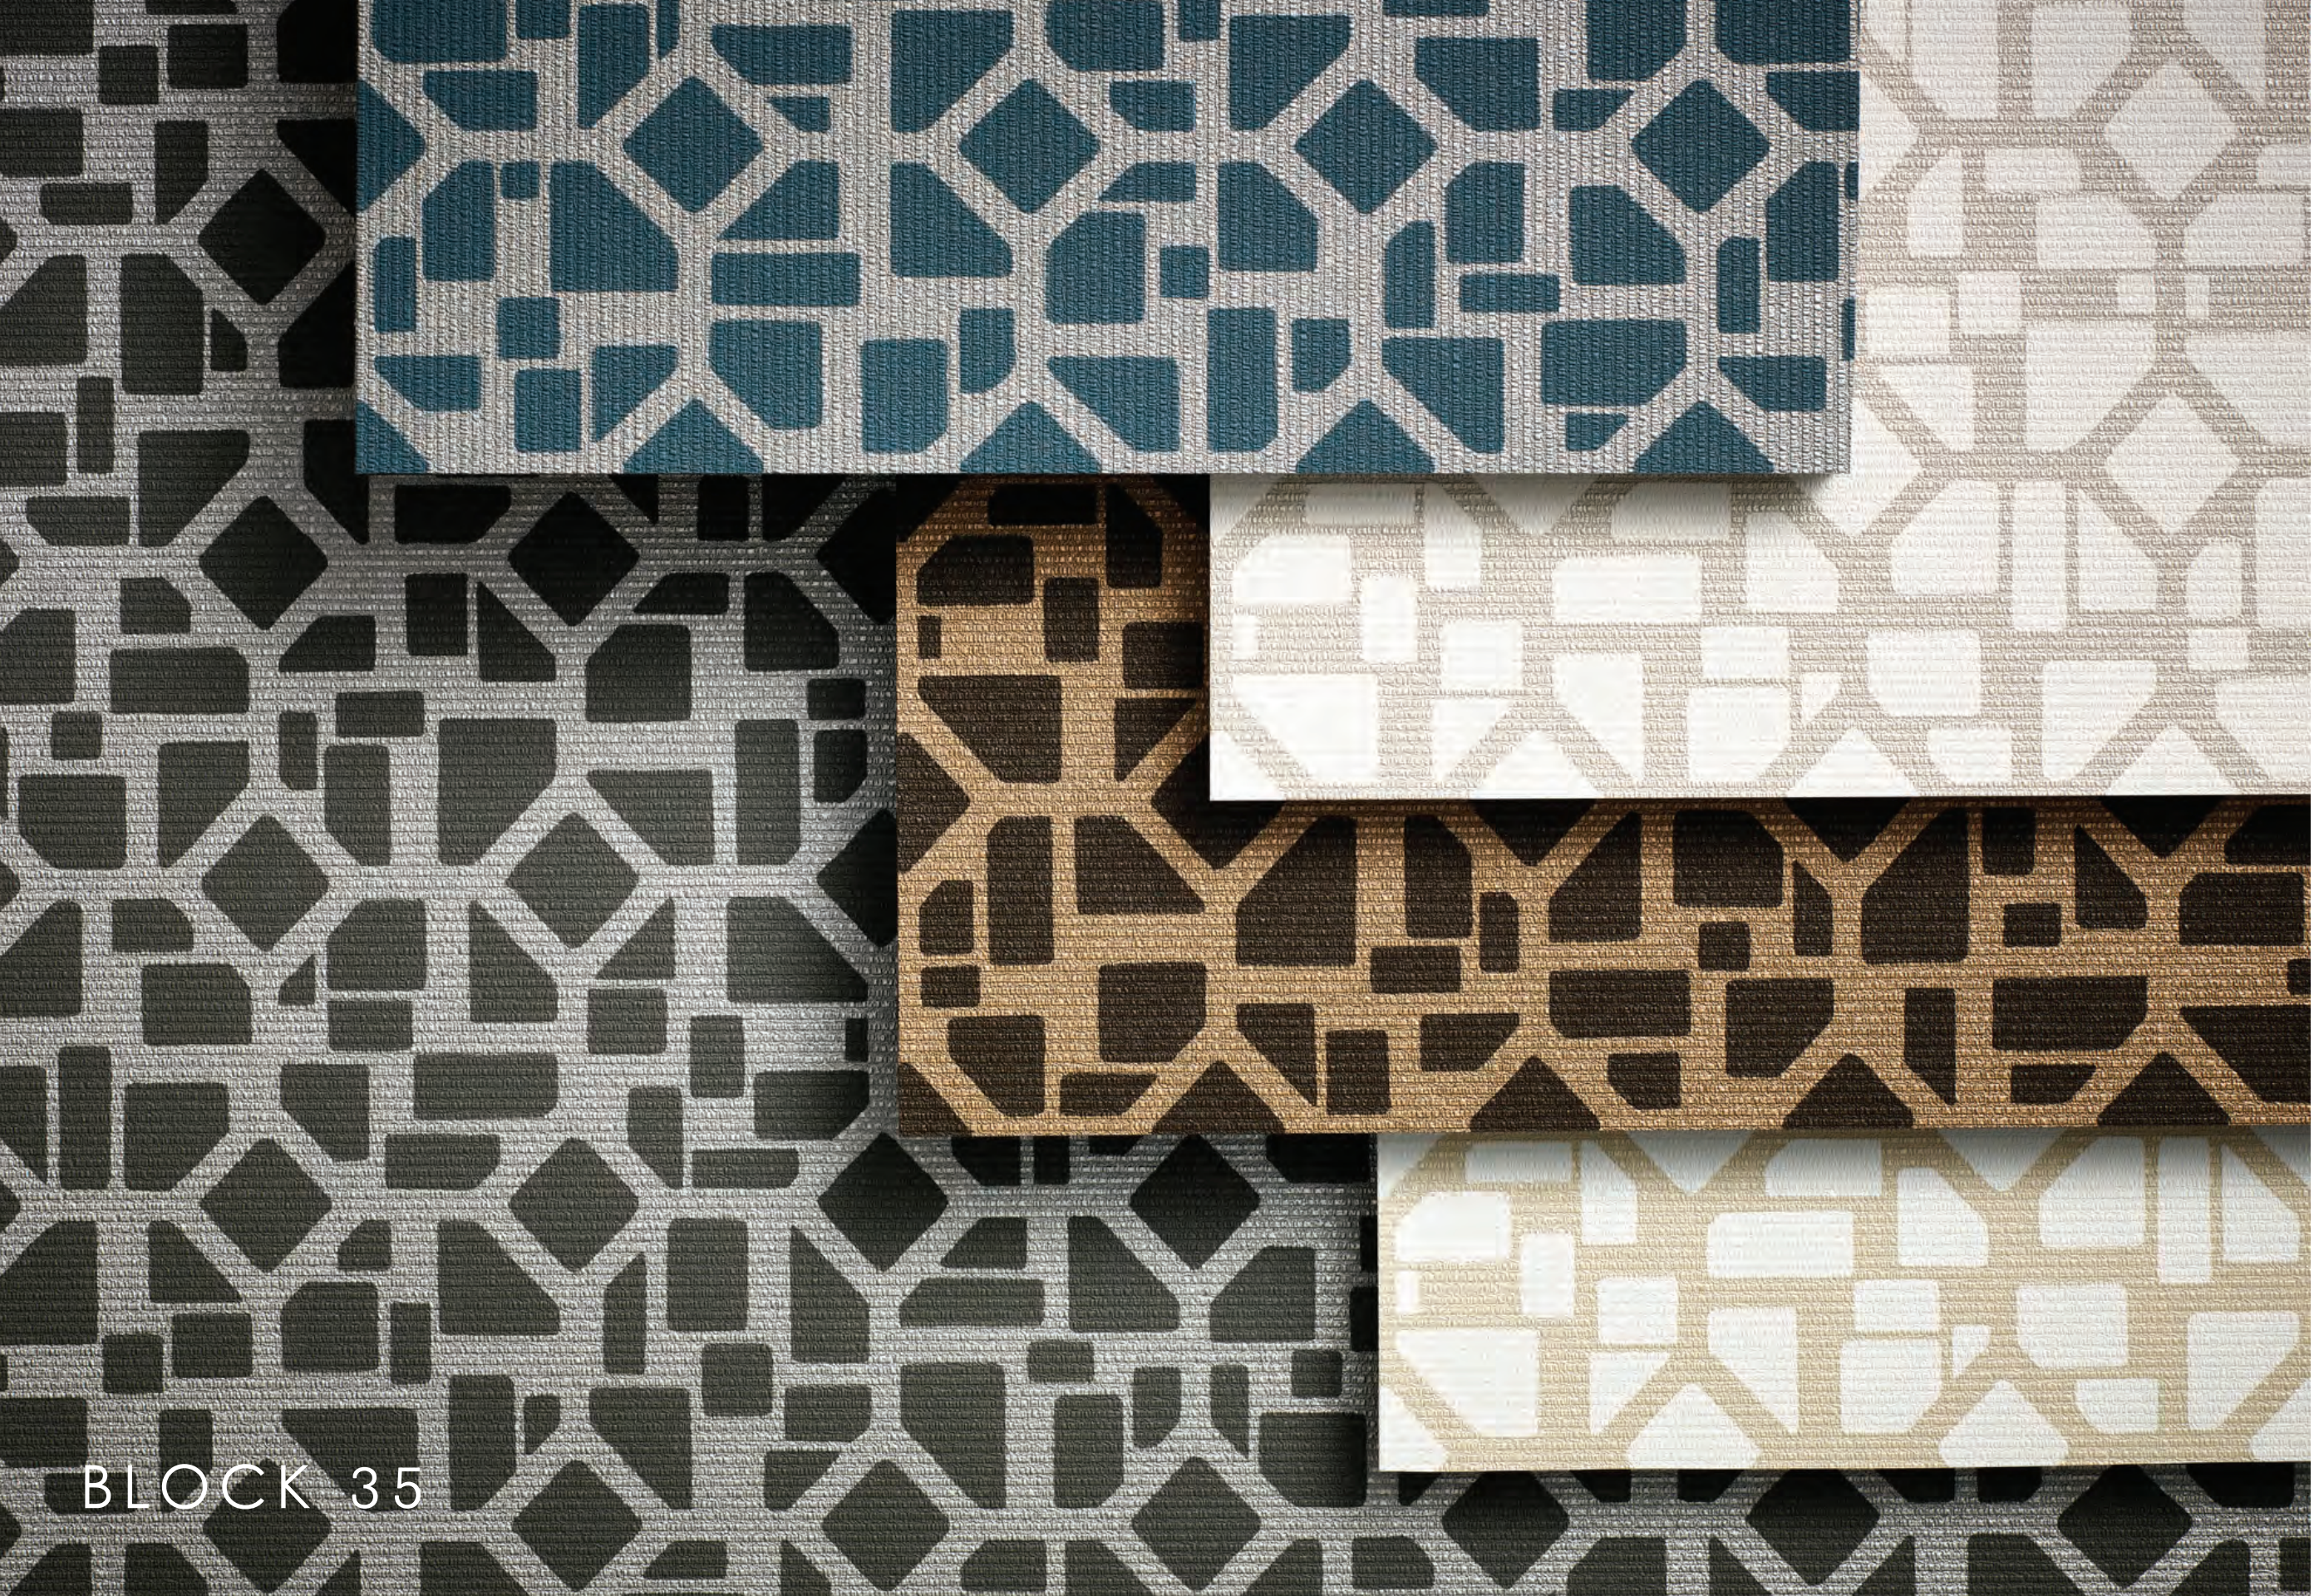

"Research supports an urgent need to change the way we build, maintain and work in hospitals, and many facilities could do more to promote rest and healing while preventing stress and infection. There's so much we can do to improve the patient experience, which is inextricably linked to how well patients rest and recover. Some of the most interesting research on the way hospitals are built examines the role of nature to promote healing. Even just images of nature may be beneficial. One study found that people watching videos of nature seem to have higher tolerance for pain, more positive emotions, and lower heart rates and blood pressure."
-Dhruv Khullar, M.D., M.P.P.

"Among the kindred effects of light I may mention, from experience, as quite perceptible in promoting recovery, the being able to see out of a window, instead of looking against a dead wall; the bright colors of flowers; the being able to read in bed by the light of a window close to the bed-head. It is generally said that the effect is upon the mind. Perhaps so; but it is no less upon the body on that account."
-Florence Nightingale from Notes on Hospitals, 1863

Creating a calming environment is a top priority in healthcare centers, given that reduced stress has been shown to shorten patient stays and improve staff productivity when nature is present. Healthcare design can also do more for healthcare workers. The connection with natural light and scenery plays a positive role in healthcare design.

The factors that influence human health and performance go hand in hand with the architectural moves that enable buildings to work with the natural environment. The ideas of creating a healthier hospital for people go hand in hand with creating a healthier, sustainable hospital.

AQUA-CLEAR

Water Based Topcoat

The onset of COVID-19 has necessitated a more systemic approach to the selection of interiors. Today, it is essential that interior materials not only be aesthetically pleasing, but easy to maintain for the sake of health and infection control. From its foundational components, to pattern design and ease of installation, Colour & Design has integrated a further advanced functionality that provides a wall finish solution as useful as it is beautiful. Introducing Aqua-Clear topcoat* - an environmentally preferable top coating to enhance the durability and cleanability of wallcoverings while protecting their beauty. The alcohol and alkaline cleaner impervious finish provides superb abrasion protection, and exceeds federal guidelines for scrubbability ten-fold!

To combat the growing concern with viral transmission, Aqua-Clear topcoat has been tested with the 13 most widely used disinfectants/cleaners in the healthcare industry. Testing protocol involved each sample being sprayed with solution till wet and left to stand 20 minutes minimum. The sample was then sprayed again, subjected to 200 runs in a Gardner abrasion tester, dried, and then visually inspected for damage to the print layer. In all 13 accounts, Aqua-Clear top coat proved resilient to degradation and yellowing, providing an ideal wall finish solution for those who value infection control with simultaneous demand for aesthetics, durability, and ease of maintenance.

*Look for the Aqua-Clear topcoat logo on pattern pages for availability.

INVISICAP

complete **chemical** protection

As the COVID-19 era drives the urgency for more aggressive cleaning and disinfecting programs across all commercial interiors, many wall finishes will not tolerate repeated application of harsh chemical disinfectants. Into this void, we introduce an effective new solution.

Applying InvisiCap PVF film to industry-leading designs will ensure **complete chemical protection** for your wallcovering, while preserving the nuanced, natural looks of silks, linens, woven textures, and other designs.

Ordered as a custom run, with normal lead times, InvisiCap protects against **all cleaning and disinfecting chemicals, in any concentration**. When a facility needs natural-looking wallcovering with no cleaning limitation, specify InvisiCap on listed patterns. (Refer to second page for full list)

INSTALLATION

- Same guidelines as for Type II installation
- Can horizontal “railroad” install, under chair rail
- Excellent pliability, not crease-prone

TO ORDER

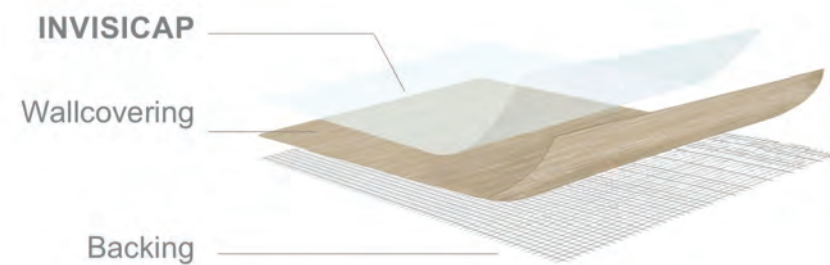

- Check to see if your pattern is available with InvisiCap
- 400 yard minimum is required
- Not Available for micro-venting

SAMPLES

- Strike-offs = Normal lead times
- Mock-up = 400 yard minimum order

PERFORMANCE

- High Visual Clarity
- NO CHANGE from disinfecting with any chemical

CAPPI

Designs That Can Be Specified with InvisiCap Protective Barrier

Azeri, Cappi, Cappi Linen, Pilio, Zeteo, and Zeteo Linen.

ZETEO LINEN

Breathe Free™ Technology

Are You Concerned about Vapor Barriers?

Breathe Free™ micro-vented wallcovering can be used to help control unwanted moisture inside a building envelope. Building professionals design and construct buildings to be free of moisture intrusion. Occasionally construction mistakes, maintenance of the building, or design flaws allow moisture, or water vapor, to intrude into the building wall cavity. Sufficient moisture or water vapor in the wall cavity and cool temperatures within the building's interior may cause condensation to occur within the wall cavity. When condensate (or moisture from other sources) accumulates on the back of the wallboard (inside the wall cavity) it may migrate into the wallboard. Unless a path is present for the moisture to be removed from the wallboard surface the moisture may eventually build to a point that mold growth could occur in components of the wall. Breathe Free™ micro-vented wallcovering used in conjunction with permeable wallcovering primer and adhesive will allow the moisture to move through the drywall and micro-vented wallcovering. The excess moisture will be evaporated into the building's interior and eventually removed by the building's air conditioning system.

Please request a sample prior to placing your order.

WINDOW FILM

The Perfect Balance of Privacy and Design

Window Film can enhance the design of your building; offering increased safety, comfort, and security. It can also contribute to lowering the cost of keeping your building cool and comfortable.

An average of 33% of AC bills is due to solar heat transferred through the windows of a building. Window film reduces light pollution, and allows natural light while rejecting the heat that typically follows. This lowers the overall energy consumption of a building and can contribute to LEED credits.

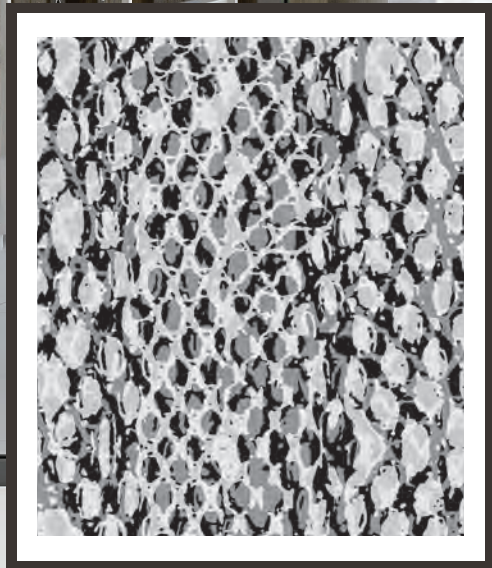

Window film provides an extra layer of protection while offering enhanced privacy. Businesses have the opportunity to add a unique sense of style to any space, utilizing custom colours, scaling and opacity levels; the design possibilities are limitless.

All DeNovo Wall patterns are available for digital imaging on our window film substrates. Please contact Customer Service at Surface Materials for custom scaling, opacity & colour samples.

DIGITAL PRINTING

When the barriers between imagination and what can actually be executed go away, true creativity happens. With DeNovo Wall Digital Imaging, your wallcovering possibilities are no longer restricted by scale, hue, or a limited pattern library.

At DeNovo Wall Digital Imaging, we use our digital surfacing technology to unleash your creative inspirations. Design without boundaries!

Be inspired with
DeNovo Imaging
